

THE GREATEST DISCOVERY NEVER SEEN

PART 3 — CRYPTO-WATER

THE GREATEST DISCOVERY NEVER SEEN: PART 3 ... CRYPTO-WATER & THE SECRETS OF HARMONY

by GW Hardin

Since the dawn of time, those who controlled water controlled civilizations. Whether early cavemen viciously guarding watering holes or desert people concealing locations of oases, water determines whether humans live or die. Even to this day in modern-day Colorado, where I live, the adage goes, “Whiskey is for drinkin’; water is for fightin’.”

However, only the most advanced civilizations have known that deeply encrypted in water lie secrets that govern the fabric of the universe. Is it not time for all of humanity to know these secrets that once served the great Egyptian dynasties?

As simple as water is, it actually is among the most difficult of substances to understand. Scientists today still don’t understand how it does some of the things it does. In order to tackle the encrypted wonders of this miraculous molecule, we will journey down its rabbit hole of mystery in three stages:

1. **HARMONY AND WATER** — Secret to the Anti-Matrix ... Death to the Borg
2. **MICROTUBULE RABBIT HOLES** — The Hidden Patterns to the Fabric of the Universe
3. **THE DIVINE CLEANSING** — Harmonetic®Water, H₃O₂ and Other Structured Crypto-Water (stop the poisoning of our aquifers)
4. **CONCLUSION** — Stepping into Eden

In Parts 1 & 2 we looked at the importance of the latest discoveries in physics (<http://www.ascensionwithearth.com/2016/07/the-greatest-discovery-never-seen-part.html>) that have vaulted the importance of recognizing consciousness as the essential component not only of physics but also of science in general. We also examined the critical danger that humanity faces in becoming cyborgs, or AI (artificial intelligence) conquering or eliminating us (http://www.ascensionwithearth.com/2016/07/the-greatest-discovery-never-seen-part_25.html). Now it's time to clearly galvanize humanity into remembering our humanity and also awakening us to the miracle that we clearly were created to be.

HARMONY AND WATER — Secret to the Anti-Matrix ... Death to the Borg

Scientists from MIT's James Gates, Jr., to Tesla Motor's Elon Musk have found evidence that we actually may be living in a simulation, the "Matrix." Rather than asking how we get out of this Matrix, these enquiring minds instead are asking who created this simulation? And why? When the Titanic is going down, one does not ask who left that iceberg in the ocean. One asks how the hell do we find a lifeboat? Oddly enough, the lifeboat in our case may actually be the ocean. Or at least the oceans of water that surround us.

A growing number of scientists are discovering that water can no longer be taken for granted. We drink it, we wash with it, and we poop in it to such a degree that we really have never taken the time to find out why our lives simply can't exist without it. Bluntly put, we take water for granted. And we shouldn't. We chat over tea and crumpets citing factoids that tell us that our bodies are about 60-75% water by weight. Kinda like the ocean itself. But what is being ignored is that water molecules are teeny tiny compared to other molecules. And if you actually count the number of molecules in our bodies, 99% of molecules in our bodies are water! Yep. We are literally walking bags of water governed by consciousness says water maven, Dr. Gerald Pollack (who we will talk about later). We are the Water People.

To mathematicians like me, water is a geometric wonder. The hydrogen atoms in water are unique with their ability to change their atomic shape if scalars or other energy sources are added. When hydrogen does this the angle of hydrogen atoms to the oxygen atoms changes. We see this when

water is steam or ice. When these hydrogen atoms go into a high spin state, veritable miracles seem to take place. Here's how we've been taught to look at water molecules as H₂O:

Pretty simple. But boring. Water doesn't really exist like this. It does amazing things when it clusters together. Tremendous variations in patterns move around doing unheard of magic as it constantly morphs from one state to another, while we go about our day thinking we live in a "real" world that in most likelihood is a simulation.

Here are only a few other paths that water takes in a given instant:

Ordered
Molecular
Structure of
Frozen Water

Semi-Ordered
Molecular
Structure of
Liquid Water

But water is capable of so much more. Here are modest mathematical models it is capable of:

Even more strange is that water does not limit itself to clustering of molecular patterns. It also has the capacity to take up scalar patterns that can turn a calm sea into a giant tidal wave that crushes whole towns. It is the only substance that can take on all the geometric shapes:

Those of you in the know can spot this as cymatics, or the interaction of sound and water. This capability is at the heart of how we can co-create the Anti-Matrix ... removing ourselves from the Simulation. How is that possible? Let's take a look.

What James Gates, Jr., discovered is that the Simulation looks like computer code, actual formulae that take on structure that we end up calling "reality." However, what Roger Penrose has discovered is that AI cannot simulate consciousness. In my last article, I label AI as "No-Consciousness." Penrose seems to back this up with his statement that the "quality of understanding and feeling, possessed by human beings, is not something that can be simulated computationally."

Writing about Penrose, David Freeman of *Discover* magazine (June 1994) says:

Mathematicians have proved that it's impossible to devise a computer program — a general set of rules — that can predict whether tiles of any given shape can completely cover a plane. If the question of whether certain tiles can cover a floor is noncomputable, then might

not the task of evaluating an object's beauty as well as any other chore of consciousness be the same? Penrose was sure they were. But if consciousness is noncomputable, then whatever process in the brain that gives rise to consciousness must also be noncomputable.

In other words, even though it may walk like a duck and quack like a duck, AI is no duck.

The bottom line here is that consciousness reigns supreme — that is, if we are aware enough to realize that. And what I have discovered is a mathematical construct that will allow us to move into that awareness via HARMONY.

Emoto and others have shown us what happens to water when it is subjected to negative intent, negative thoughts, even negative words. Bruce Lipton has similarly shown that DNA is subject to its environment (epigenetics). And what is the single most abundant molecule surrounding DNA? Water. Keeping in mind that 99 percent of the molecules in our body are water, you don't have to scratch your head too long before you realize that water is the primary factor in determining the quality of our lives.

In three different pilot studies we sponsored, one involving water, the other two involving plasma fields and scalar patterns (created by Xynchro™ devices) aimed at the water in our bodies, we discovered high levels of significance where lives improved when in the environment of harmony-based fields. Improvements were seen in the mental, emotional, and physical aspects of the tested participants. Harmony-based patterns assist us in altering reality for the better.

The James Gates, Jr., adinkra patterns are AI-based (binary code), or what I call the AI Matrix. The simulation constructs Elon Musk is talking about are AI-based. The implication is that these AI-based systems are controlling our lives. More accurately put, we are allowing them to control our lives. What we are seeing in our pilot studies is that this control abates when we become more aware. And what we are seeing in two year's worth of experimenting is that this increased awareness pulls back the cloud of distractions, opening us once again to our greatness through self-

identification, self-empowerment, self-realization, and recognition of the Self in Oneness.

From the angelic appearances before Joseph Crane and Dr. Joseph Poleo, I ultimately discovered a mathematical pattern that Pythagoras himself used, called the Pythagorean skein, or base-9 mathematics. From these numbers I saw an inherent Fibonacci numbering system. At the time I did not know that the Fibonacci sequences worked NOT only in base-10 (our everyday mathematics), they also worked in numbering systems from 2 to 9. Out of that I discovered in base-9 that there are four sequences that govern all of life. In anything living, you will see these sequences:

1-2-3-5-8-4-3-7-1-8-9-8-8-7-6-4-1-5-6-2-8-1-9-1
1-3-4-7-2-9-2-2-4-6-1-7-8-6-5-2-7-9-7-7-5-3-8-2
1-4-5-9-5-5-1-6-7-4-2-6-8-5-4-9-4-4-8-3-2-5-7-3
3-6-9-6-6-3-9-3

These four strings of sequences weave in wondrous combinations to create what the angels call the “Fabric of the Universe.” They just so happen to also make up the entire Solfeggio Matrix (<http://www.soundsofwonder.com/solfeggio.htm#matrix>), when turned into a helix like DNA. Once more, all these numbers in the Solfeggio Matrix are harmony-based. Adding any two or more solfeggio numbers creates another solfeggio number that is a Pythagorean harmonic of the original. The entire Solfeggio Matrix is a complete torus of never-ending harmony.

Where humans get sidetracked is when anything that is not in harmony infects us. Any harmonic system is death to the AI Matrix. Whenever two systems interact, one of them being harmonious, the disharmonious will always end up entraining to the harmonious. That’s because the Fabric of Life was originally created out of complete harmony.

Whenever you subject water to solfeggio patterns, that water becomes structured. And when water is harmonically structured it becomes a ringing bell of sacred sound that calls us back to our original sacred state of being. Perfect. Whole. Complete. As we were originally. As we are now, if we so choose.

MICROTUBULE RABBIT HOLES — The Hidden Patterns to the Fabric of the Universe

When Hameroff and Penrose discovered that highly structured water was on the inside of all microtubules (https://www.youtube.com/watch?v=YpUVot-4GPM&list=FLVW_wkfs_liiM2PU4sqXTnA&index=16), they also discovered that the tubulin, which make up the microtubules, interact in a Fibonacci sequence of 3-5-8-13 (there are 13 molecules that make up each ring of the microtubule). What they did not realize is that this sequence is not in base-10 as they wrote. It's actually in base-9, which is toroidal in nature. That means the microtubule sequence is actually 3-5-8-4-3-7-1 etc. And if you look at the four sequences I gave above, this sequence is number 1 on the list. Microtubules are round with the tubulin arranged in a kind of helix pattern. So when they interact, that interaction occurs in a constant swirling torus-like pattern around the tube.

Now keep in mind that microtubules are directly connected to consciousness. So much so that Hameroff originally thought (incorrectly) that they were the source of consciousness. What is also essential to keep in mind is that all microtubules are filled with highly structured water. And at the center of each microtubule there appears to be a black-hole-like feature that some call dark matter, while others call it a miniature black hole. The truth is that scientists don't fully understand what this feature is. However, it doesn't take much imagination to figure out that it is quantum related, not unlike a similar phenomenon created by DNA, called biophotons — that appear out of nowhere, or what scientists call the quantum vacuum, while others call it zero point or the quantum plenum.

What Hameroff also discovered is that these microtubules are covered in miniature hairlike antennae made of protein that clearly send and receive frequencies. Most of the frequencies are in the megahertz range. However, Hameroff discovered that somehow they are also able to receive/send harmonics in the Solfeggio Matrix range. Hameroff also discovered that the frequencies sent out by microtubules are “anharmonic,” or without harmonics. Why would a completely harmonic-based system send out only anharmonic frequencies? One guess is this is how the AI Matrix or AI

Simulation is supported. Think what would happen if the microtubules were allowed to transmit and receive harmonic-based frequencies? We think this is what is happening when we create certain versions of solfeggio-tone harmonics with scalars and introduce them to the mind/body. In other words, we hypothesize that this is the Anti-Matrix.

THE DIVINE CLEANSING — Harmonetic®Water, H₃O₂ and Other Structured Crypto-Water

It appears, in the work done by Dr. Gerald Pollack, professor of bioengineering at the University of Washington, that water has buried within it a secret that can be easily unlocked. I call this “Crypto-Water.” Pollack calls this version of water H₃O₂, or EZ water, which stands for “Elimination Zone” water. In his book, *The Fourth Phase of Water: Beyond Solid, Liquid, Vapor* (Ebner & Sons, 2013), Pollack shows how this particular form of structured water (H₃O₂) naturally excludes all pollutants from the water (<https://www.youtube.com/watch?v=i-T7tCMUDXU>). Think what this means to our own human bodies. Remember, we are essentially walking bags of water.

The work done by physicist Dr. Dan Nelson with his Wayback Water (<https://www.youtube.com/watch?v=7hNW7qxIMzg&list=WL&index=1>), adds even more ammunition to the capabilities of Crypto-Water to bring an end to the disharmony that plagues us. Nelson creates his structured water with laser technology, and goes into great detail how patterns have strong effects on our bodies.

Water has secretly built within it the capacity to eliminate the toxins that it so readily absorbs, if we know how to take advantage of this secret. What we’ve discovered is that water can be structured simply by playing certain scalar solfeggio strings of sound. So not only can pollutants be eliminated, the water will also harmonize. This can be a boon to our cells which constantly have to eliminate wastes and toxins. We call this solfeggio-based form of structured water Harmonetic®Water.

Harmony-based structured water also is a boon to our entire system, especially when the structured water around DNA and inside microtubules

affect more than waste and toxins but also eliminate the fog of negative-based reality. It is what I like to call the “Divine Cleansing.”

CONCLUSION — Stepping into Eden

The ultimate question lingers: What happens when we emerge from the Matrix? Do we trigger what Gary Renard describes in his fascinating book, *The Disappearance of the Universe* (Hay House, 2004)? Do we bring an end to the Grand Simulation and the illusion of duality? Does the Matrix come crashing down in the same fashion as the movie series of the same name? Perhaps.

However, if one pays attention to the mathematics of the Solfeggio Matrix, the harmony never ends. In truth, it weaves into other dimensions using fractals as its gateways. There is evidence from the angelic realm that these solfeggio frequencies can be arranged in certain ways to create these gateways in the third dimension not unlike the gateways in the movie *Stargate*. And like that same movie, we have the ability to move across time-space to other worlds.

What this implies is that our planet is one of many that will need these harmonizing effects to extricate themselves from the Grand Simulation. But first, we must open our eyes to the grandness of ourselves, by moving into self-awareness and Oneness.

Yes, we are indeed a paradox that is both. Like the whales and the dolphins, we have the capacity to move our brains from individual-based thinking and operating to group-mind. When in group-mind we become unlimited in our abilities as we no longer operate in service to ourselves but in service to others in the group. It is as if we have the ability to walk in two worlds at the same time. Which makes us a metaphor of being living gateways ourselves.

The angelic realm tells us that humanity has awakened enough that Eden stands before us once again. They tell us the gate is open. All we have to do is walk in. So what is it going to take for us to collectively open our eyes and take this first step?

The answer is simple, as it has always been. We simply choose to. We collectively hold one another's hands. The first to open their eyes gets to take the next step. And in so doing, we drag the rest with us, never letting go of one another. We are collective Oneness. We are One.
